AI DEFECT INSPECTION PROGRAM FOR LINE-SCAN CAMERAS

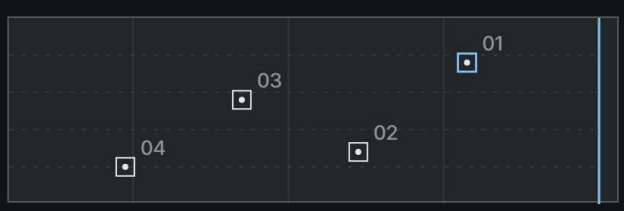

IntScan Pro

Inspects continuously moving materials, in real time

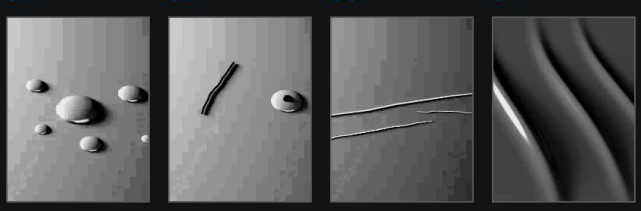

Line-scan cameras capture one line at a time · in step with the moving material · OK/NG by your inspection settings

Paper · film · metal · textiles · Installed on PCs and servers in your plant (on-premises)

MAP Defect map · length × width

01 Bubble · 02 Foreign matter · 03 Scratch · 04 Wrinkle

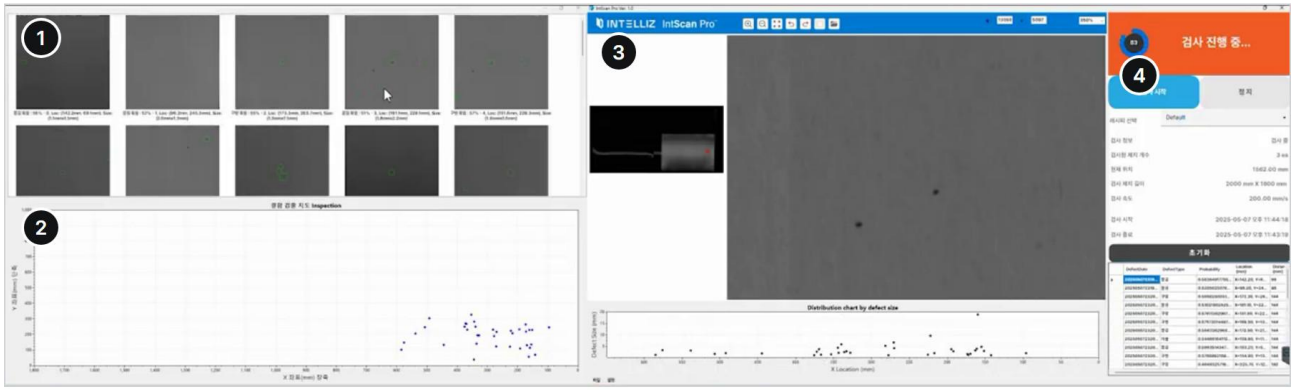

Concept diagram: IntScan Pro finds defects as the web passes the scan line and maps them by position

02 — OVERVIEW

Captures moving material, judges it, keeps the record

IntScan Pro is an on-premises AI defect inspection program for line-scan cameras. An encoder tracks the moving web (the continuous sheet of material) and triggers INTELLIZ line-scan cameras and lighting to capture it in real time; IntScan Pro then decides OK/NG by your recipe (your inspection settings).

FIG. 01 SOFTWARE · INTSCAN PRO

1 Defect images 2 Defect position map (mm) 3 Scan image · size chart 4 Run status · defect list

IntScan Pro screen · a scene from the technical demo video (2025, Korean UI)

1–5 cameras
Several cameras at once
1 to 5 line-scan cameras

30 fps
Fast image processing
About 30 images per second

OK / NG
Judged by your recipe
Results · logs · images kept

R2R
Roll-to-roll processes
Paper · film · metal · textiles

01 CAPTURE

Captures without stopping

An encoder tracks the web's travel and triggers the camera line by line, in real time.

02 JUDGE

Sorts by your criteria

Finds defects and decides OK/NG by your recipe.

03 RECORD · RUN

Records, and keeps pace

Keeps results, logs and images, and keeps pace with fast lines for stable inspection.

For paper, film, metal and textiles on the move.

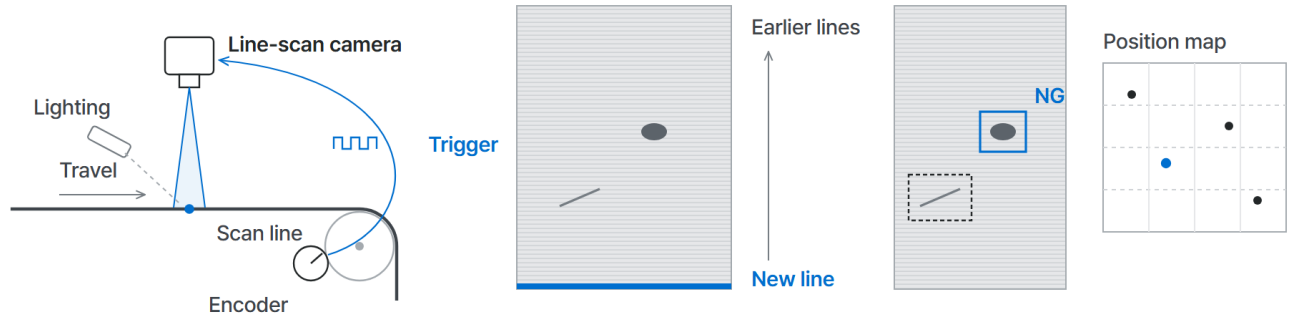

One to five line-scan cameras inspect right on the fast production line (inline inspection), inside your plant.

03 — FEATURES · LINE SCAN

Line by line, the whole web in one image

Line scan captures moving material one line at a time with INTELLIZ high-speed line-scan optics (camera + lighting) and lets AI find defects in the joined image. An encoder on the roller tracks the web's travel and triggers each line, so even nonstop roll-to-roll (R2R) processes get uniform images and stable inspection.

FIG. 02 LINE SCAN · ENCODER · TRIGGER

01 Track travel
The encoder measures the web's travel

02 Capture a line
Each step of travel triggers a line

03 Join the lines
Lines join into one unbroken image

04 AI judgment
Finds defects, OK/NG by the recipe

05 Record
Results, logs, images with position

Line scan, step by step: track, capture, join, judge, record, with each defect kept at its position

Key features as on the product page

01	High-speed line scan	Real-time line-scan inspection for fast, continuous roll-to-roll production
02	Real-time quality check	Inspection data is analysed at once for quick quality control and predictive maintenance (servicing before a failure)
03	Keeps pace with production	Fast image processing (about 30 fps) for smooth high-volume inspection
04	Industries	Paper, film, metal, textiles: industries that produce continuously, roll to roll

AREA SCAN · INTSIGHT

Inspecting discrete parts?

Discrete parts that stand still, move in steps (indexed) or ride a conveyor go to IntSight, our program for area-scan cameras (one full frame per part).

See IntSight · intelliz.net/en/products/intsight

04 — IN THE FIELD · DIGITAL TWIN

Beside the line, results at a glance

Lighting brings out the surface and a line-scan camera captures the moving film; on the IntScan Pro screen beside the line, defect images and inspection progress appear right away.

FIG. 03 IN THE FIELD

05 — BEFORE INSTALL · OPTICS LAB

Before it goes on the line, check that the defect shows

In the Optics Lab on the INTELLIZ website, pick your product and the defect you worry about: it shows at once whether line-scan inspection can see it and whether a sample demo makes sense. The set-up and the expected image are calculated; a sample demo confirms it.

RESULT · EXAMPLE

Clear film · Bubble · from 0.5 mm width 2,000 mm · 120 m/min

"It looks inspectable"

A calculated estimate, not an image from real equipment.

The answer is an estimate from a simple, uncalibrated model. Whether it really works is confirmed in a sample demo.

The suggested set-up on screen (lighting, cameras, lens) is a generic example for these conditions, not a product specification.

01 PICK

Material and defect

Pick the closest material, the defect, and the web width, line speed and smallest defect.

02 CALCULATE

Will it show?

Shows a suggested set-up, the expected image and which defects look visible or marginal.

03 SAMPLE DEMO

Confirm it for real

Send us a sample and we will image it under these conditions.

06 — PLATFORM · INSPECTION PACKAGE

Train in IntLearn Pro, inspect in IntScan Pro

One file, the inspection package (.izpkg), carries the AI model trained in IntLearn Pro, with its inspection steps and pass criteria, to IntScan Pro (line scan) and IntSight (area scan) on the line. IntScan Pro and IntViewer run the inspection and monitor the results.

FIG. 06 LEARN → PACKAGE → LINE

One .izpkg from IntLearn Pro carries the same steps and pass criteria to line-scan and area-scan inspection

Products on the same platform product page PLATFORM

01

IntCloud Optic

An AI optical inspection module that captures defects so they can be seen

02

IntLearn Pro

Deep learning inspection software that finds defects like an expert, with 12 engines and modules, the most in Korea, and LLM integration

03 New in 2026

IntLearn Kinesis

Validate in a virtual factory before you install

04 New in 2026

IntWise

Operate by speaking, and the know-how becomes a company asset

Images captured by IntCloud Optic are judged by IntLearn Pro with AI, while IntScan Pro and IntViewer run inspections and monitor the results.

Line scan or area scan: one package.

IntScan Pro and IntSight both take the same .izpkg and apply its inspection steps and pass criteria.

07 — CASES · VIDEO

Film and paper, where the web keeps moving

INTELLIZ use cases inspected with IntScan Pro. Both use line-scan inspection; the published summaries do not state a customer, project status or quantitative results.

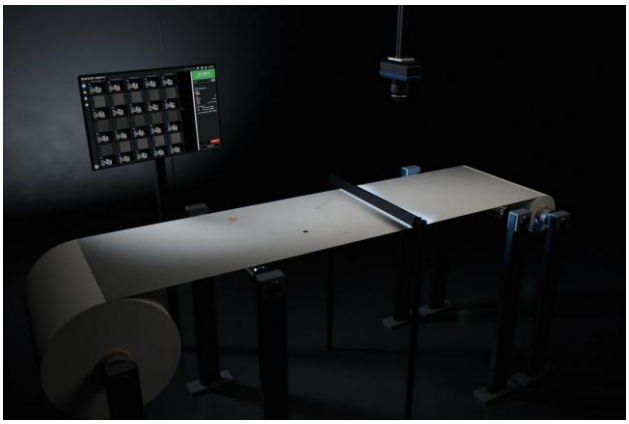

CASE · LINE SCAN

Defect Inspection in Film Manufacturing

Monitors surface defects such as bubbles, scratches and foreign matter in real time during film manufacturing, sorts out defective rolls and builds up quality data.

Considering a similar inspection?

Including the following in your inquiry helps us prepare our answer.

01	What you inspect: material, shape and size	02	The defects to find and your pass/fail criteria
03	Line speed and how products are conveyed	04	Space available for cameras and lighting
05	Where results need to go (PLC, reject unit, etc.)
