INDUSTRIAL AI YOU OPERATE BY SPEAKING · NEW IN 2026

IntWise

Operate by speaking, and the know-how becomes a company asset

Say it, and the lights and inspection are adjusted · Risky changes wait for a person's approval
A veteran's judgment passes to the next operator · Runs on in-house GPU servers
Operate as naturally as talking

HISTORY Command history · in order

03	"Use only 3 cameras" High risk · approved	Checked ✓
02	"Make the lighting a little brighter ..." Ran	Checked ✓
01	"What are the light values now?" Read	—

KNOW-HOW How the know-how stays

01	A veteran's instructions and calls	→
02	Knowledge base · inspection packages	→
03	The next operator picks them up	

A spoken instruction passes three checks before it changes the equipment, then stays on record — IntWise concept diagram

02 — OVERVIEW

Say it in everyday words, and the AI sets up the equipment

"Make the lighting a little brighter and inspect it again." The AI brightens the light and inspects again. Veterans' instructions and judgment stay in a knowledge base (a shared company record) and inspection packages (AI model and criteria in one file) for the next operator. People change; the know-how stays.

FIG. 01 SOFTWARE

Actual IntWise software screen (Korean UI)

KEY FEATURES

01 Everyday instructions

"Make the lighting a little brighter and inspect it again."

02 Three safety gates

Fixed steps · human approval · read-back check

03 Process data stays in the plant

In-house GPU servers, zero external communication

04 Know-how passed on

Veteran's judgment → knowledge base → next operator

05 Patent

Filed 10-2026-0111370 Multi-agent natural language control (several AIs share the job)

3	0	2026
Safety gates	**External communication**	**New release**
Fixed steps · approval · read-back	Runs on in-house GPU servers	A new product launched in 2026

The three safety gates, in-house GPUs and zero external communication are as shown in the company product video.

Operate as naturally as talking.

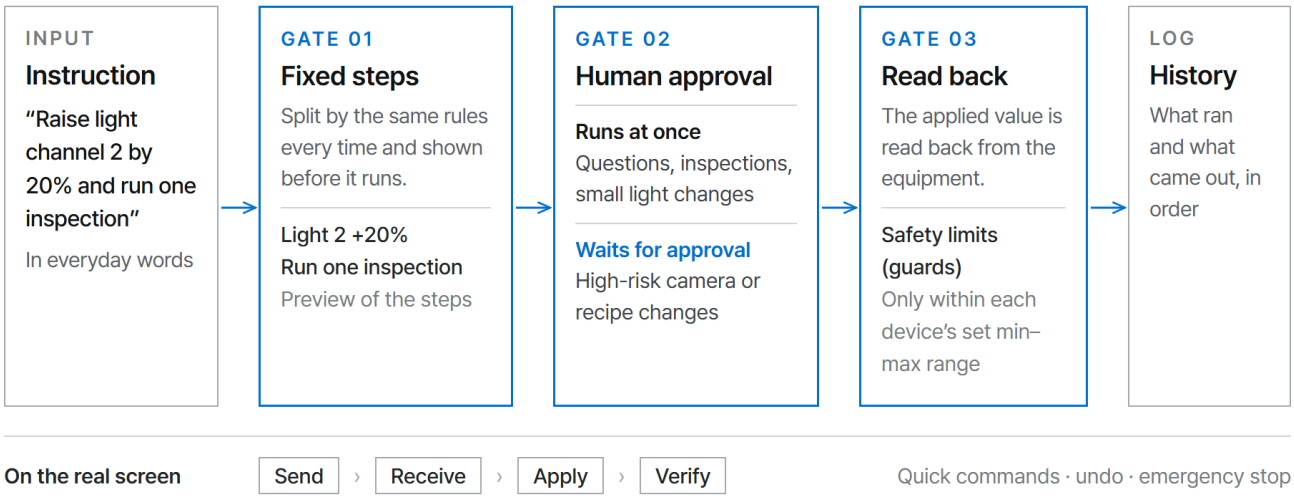

The INTELLIZ platform links four steps: capture the product, let AI judge the defects, check everything in a virtual factory before installing, and run the line. IntWise handles the last one: operation.

03 — SAFETY · 3 GATES

Checked three times before it reaches the equipment

A spoken instruction never goes straight to the equipment. It is split into steps by the same rules every time and previewed (deterministic decomposition). Camera or recipe changes (a recipe holds the inspection settings) wait for a person (human approval). Values are then read back (read-back confirmation).

FIG. 02 SAFETY · 3 GATES

An everyday instruction reaches the equipment only through three gates, and each one is logged with its result

Approval by risk level

Solution Experience · examples from the IntWise demo

Demo instruction	Risk	Handling
"What are the light values now?"	Question	Runs at once · reads current values
"Make the lighting a little brighter and inspect it again"	Low risk	Runs at once · light 2 +20% → inspect
"Raise light channel 2 by 50%"	High risk	Large light change · needs approval
"Use only 3 cameras"	High risk	Camera change · needs approval
"Lower the recipe's NG limit to 0.3 mm"	High risk	Recipe change · needs approval
Emergency stop (quick command button)	Emergency stop	Runs at once · one click

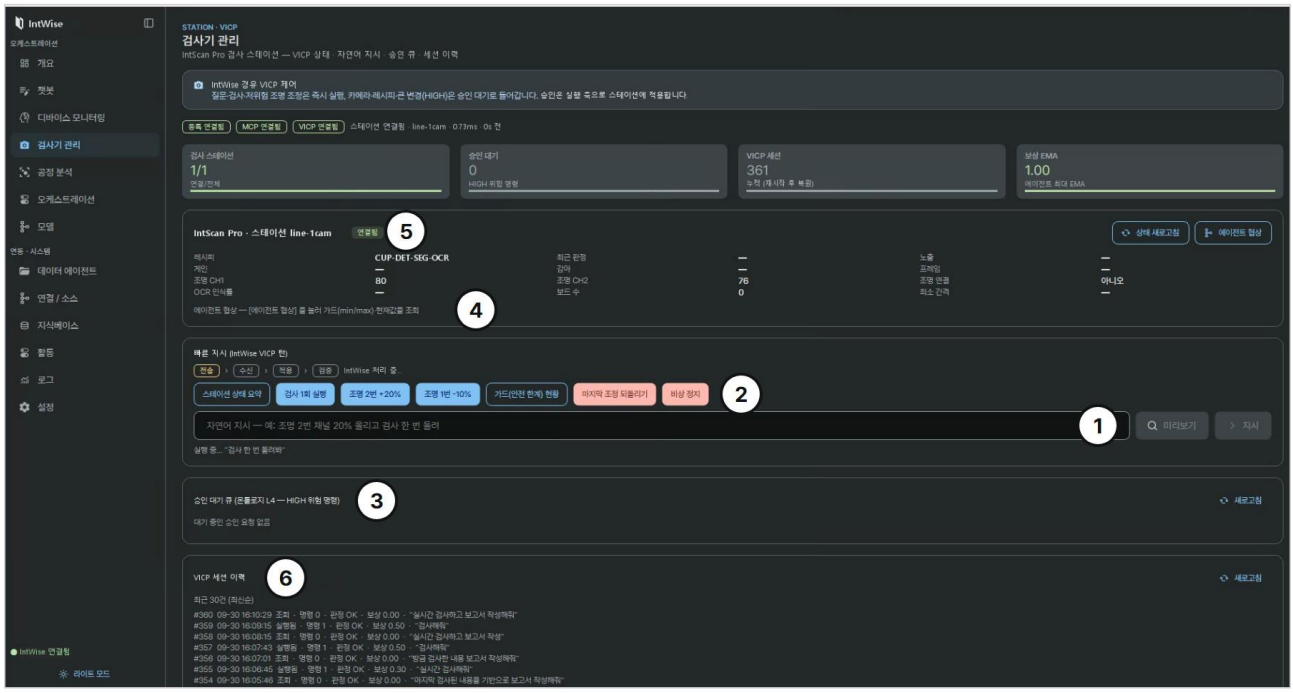

The demo understands only set sentences and its values are examples; the three safety gates are as shown in the company product video.

04 — SCREEN

One real screen, from instruction to history

One station-management screen shows whether each station is connected, instructions sent in words or with one click, commands waiting for approval, and the full instruction history.

FIG. 03 SOFTWARE · INTWISE

Actual IntWise software screen, station management (Korean UI) — numbers match key functions 01–06 below

Key functions on the actual screen

Product page SCREEN

01

Plain-language commands

Give orders in plain words, such as “raise light channel 2 by 20% and run one inspection”, and preview them first.

02

One-click commands

Station status, one inspection run, lighting adjustments, undo last adjustment and emergency stop: one click each.

03

Approval by risk level

Questions, inspections and small light changes run at once; camera or recipe changes wait for a person’s approval.

04

Safety limits (guards)

Adjusts only within each device’s set minimum and maximum, and reads current values at any time.

05

Inspection station link

Shows the IntScan Pro station’s connection, recipe, lighting and latest result on one screen.

06

Command history

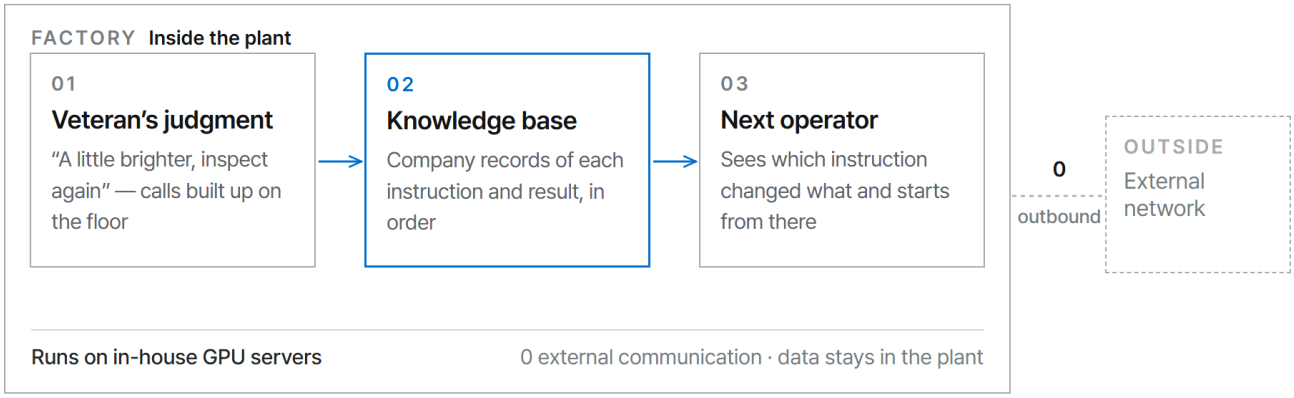

Logs every command in order with whether it ran and its result, so you can trace what changed what.

05 — KNOW-HOW · SECURITY

People change, the know-how stays

Inspection floors face three problems: people, time and criteria. IntWise takes on criteria, the know-how that leaves with a veteran, and keeps that judgment so the next operator starts from the same standard.

FIG. 04 KNOW-HOW · ON-PREMISES

Veterans' judgment stays as a knowledge base and inspection packages for the next operator, on in-house GPUs

Proof points Product page EVIDENCE

3[1]

Safety gates

Fixed steps · approval · read-back

0[1]

External communication

Runs on in-house GPU servers

1. The three safety gates, in-house GPUs and zero external communication are as shown in the company product video.
2. Videos show camera exposure, lighting and focus adjusted in natural language.

FAQ · ON-PREMISES

Can it run inside the factory, without the cloud?

Yes. IntLearn Pro, IntScan Pro and IntSight are on-premises software (installed on PCs and servers inside your plant), and IntWise runs on in-house GPUs.

FAQ · intelliz.net/en/company/faq#on-premises

Know-how stays with the company, not with one person.

When a veteran moves on, their instructions and judgment stay on record, and IntWise runs on in-house GPU servers.

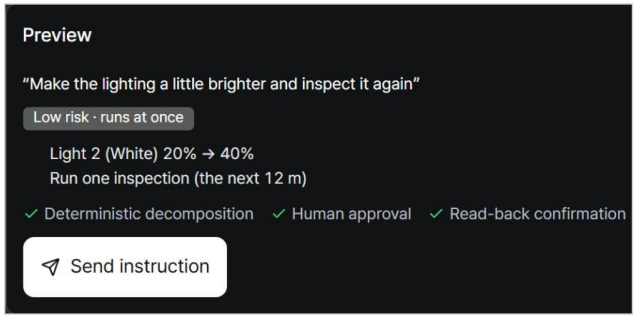

06 — TRY IT · CONTROL ROOM

Try the demo first, and give it an instruction

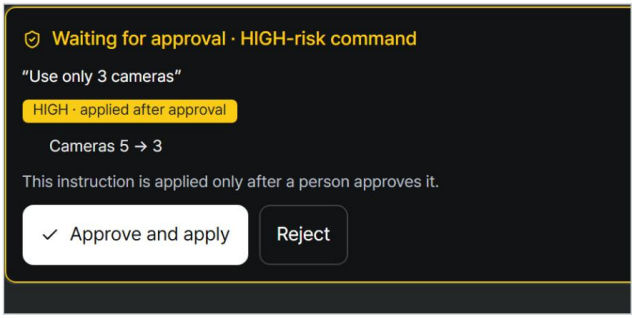

In the virtual factory of the intelliz.net Solution Experience, IntWise sits in the control room. Pick a ready-made sentence and send it: the demo splits it into steps, runs it at once or waits for a person's approval depending on the risk, reads back the applied value and logs it in the command history.

FIG. 05 HANDS-ON DEMO · INTELLIZ.NET/EN

01 Preview · split into steps

02 Waiting for approval · high risk

03 Command history · read-back and result

IntWise demo, English version of the intelliz.net Solution Experience (2026-11-03) · example screens, not customer data

An example view of a virtual factory (digital twin), not customer data

ST-04 · OPERATION · CONTROL ROOM

IntWise

Operate by speaking, and the know-how becomes a company asset

IN	Instructions in everyday language
OUT	Equipment set-up, a knowledge base and inspection packages

Solution Experience · "Try it" on the product page

Try IntWise

It understands only the set instructions here · no free text; each one breaks down the same way every time.

07 — PLATFORM · VIDEO

From capture to operation, all in one line

Four INTELLIZ products capture, judge, check in advance and operate. IntWise operates: it gives IntLearn Pro orders in plain words (LLM link) and shows IntScan Pro station status on one screen.

FIG. 06 PLATFORM · ST-01 → ST-04

ST-01
Capture
IntCloud Optic
An AI optical inspection module that captures defects so they can be seen

OUT Images that capture the defects

ST-02
AI judgment
IntLearn Pro
Deep learning inspection software that finds defects like an expert, with 12 engines and modules, the most in Korea, and LLM integration

OUT An inspection package (.izpkg): AI model and criteria in one file

ST-03 · NEW IN 2026
Pre-install validation
IntLearn Kinesis
Validate in a virtual factory before you install

OUT Synthetic data and a performance check before going on site

ST-04 · NEW IN 2026
Operation
IntWise
Operate by speaking, and the know-how becomes a company asset

OUT Equipment set-up, a knowledge base and inspection packages

From capture to AI judgment, pre-install validation and operation, all in one line: four connected products

How IntWise connects

Per product page

01	IntLearn Pro · LLM link	Linked with the INTELLIZ LLM, you direct training and inspection in plain words; image-reading AI helps read text and check synthesized defects.
02	IntScan Pro · station link	Station connection, recipe, lighting and latest result on one screen.
03	IntCloud Optic · optical control	A hands-on demo video shows INTELLIZ optical control moving to a target and focusing automatically from one plain-language command.

08 — CONTACT · NEXT STEPS

Considering a similar inspection?

Including the following in your inquiry helps us prepare our answer.

01	What you inspect: material, shape and size	02	The defects to find and your pass/fail criteria
03	Line speed and how products are conveyed	04	Space available for cameras and lighting
05	Where results need to go (PLC, reject unit, etc.)
